

THEO WANNE

Digital Tip Measuring Gauge

“Tip Gauges measure the tip opening (distance between the reed to the tip rail) on woodwind mouthpieces. Our Gauges measure more simply and accurately than has ever been possible before.” - Theo Wanne

DESIGN

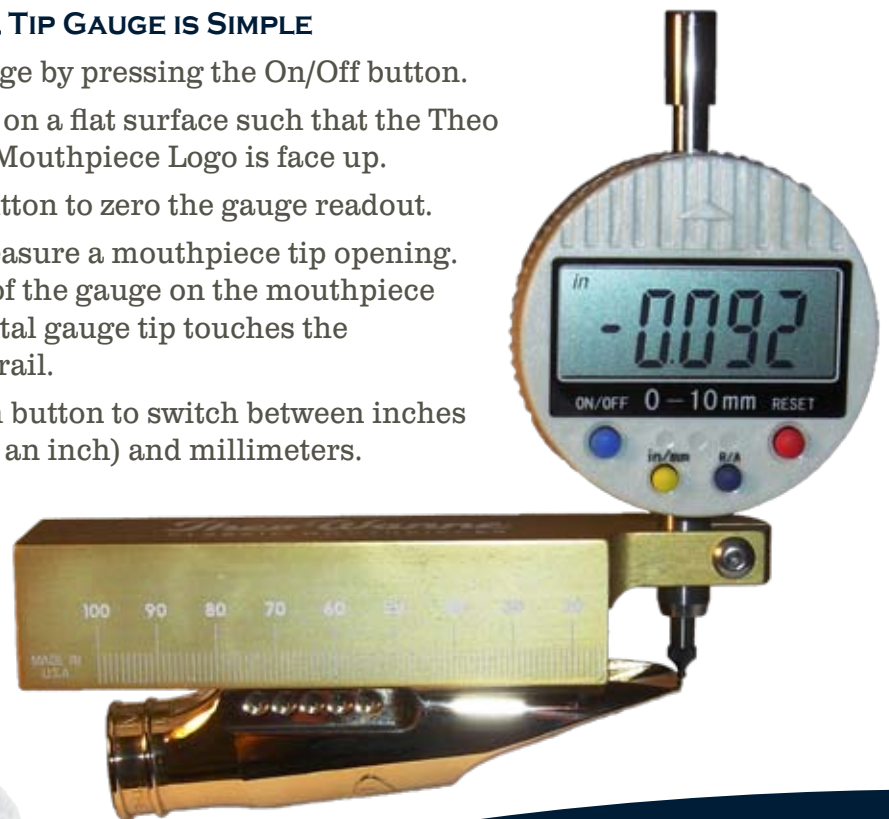

A TOP QUALITY MEASURING TOOL

The gauge body is made from gold anodized solid billet aluminum milled flat for accuracy and fits most dial and digital indicators with a 9.5mm shaft. Included with the digital indicator is a ball bearing tip (shown on the dial Indicator spec sheet). The digital indicator shown on this page has our *Accurate Tip* that creates even greater accuracy and visibility of the tip rail while measuring. Our Digital Gauge is the ultimate tip measuring tool.

USE

USING THE DIGITAL TIP GAUGE IS SIMPLE

1. Turn on the gauge by pressing the On/Off button.
2. Place the gauge on a flat surface such that the Theo Wanne Classic Mouthpiece Logo is face up.
3. Hit the Reset button to zero the gauge readout.
4. You can now measure a mouthpiece tip opening. Place the body of the gauge on the mouthpiece table so the digital gauge tip touches the mouthpiece tip rail.
5. Press the in/mm button to switch between inches (thousandths of an inch) and millimeters.
