

LIBERTY LIGATURES

and Recommendations

Create an incredible new sound utilizing our new line of ligatures, and Pressure Plates. The variations in your tone will astound and delight you! All ligatures fit the AMMA and future metal mouthpiece models.

WHAT WE SUGGEST

We recommend the titanium pressure plate with the Nickel Ligature Body, the Solid Silver pressure plate with either the gold or silver ligature bodies, and of course, the Vintified pressure plate with the Vintified Ligature.

NOTE: Please specify your mouthpiece model, ie AMMA, when ordering a Liberty Ligature to assist us in sending you the correct set-screws for your mouthpiece.

LIBERTY LIG BODIES

1. HEAVY NICKEL: Creates a clean, brilliant modern tone. It is a great ligature to bring out the individual affects of each unique pressure plate. **RECOMMENDED.** Shown top / right with the stainless steel pressure plate.

2. VINTIFIED BRONZE: Creates a warm and resonant vintage sound. with wonderful rich color. What does Vintified mean? We chemically patina the bronze duplicating the natural affects of long term tarnishing. The patina changes resonant characteristics similarly to plating, enhancing the mouthpieces vintage character. The Vintified bronze is then coated with our new space-age EPC (even particle coating) making it safe even for those rare few with brass/bronze allergies. The vintified finish does not penetrate deeper into the metal with time, so does not damage the metal. Shown to the middle / right with the vintified pressure plate.

3. SOLID SILVER: Creates a clean, smooth, round, and very pretty tone. Recommended with the Solid Silver pressure plate. Shown to the bottom / right.

4. GOLD: Creates a colorful and warm sound with a full body and tone. Shown to the bottom / left with the titanium pressure plate.
